

Terralift

Is your septic system no longer working properly? Does smelly water seeps up on the lawn when you have company or do the weekly washing. Do you have dark streaks of grass in the yard during the middle of the summer? Sewage might even be backing up in your house. This could be a sign your leach field is exhausted and badly needs to be repaired or rejuvenated.

Terralift TM can provide a solution that is fast, effective and relatively inexpensive. In a few hours years of life can be added to your septic system without disturbing the turf. Terralift is a patented system that represents a technological breakthrough in soil restoration. It solves a number of problems with your septic system, including compaction, saturation and improper drainage almost immediately. It does not use chemicals and will not pollute your property.

Call today to see if your septic system failure could be a candidate for the Terralift tm. We can perform a brief diagnoses over the phone and give estimates on the spot. Terralift is a non-invasive rejuvenation procedure that involves extremely minimal excavation. Imagine it and a failed system, fixed with no digging!
